Alpha Presentation Intelligent Shopping List

The Capstone Experience

Team Meijer

Lauren Antakli Jacob Buckley Christina Harper Adam Pruim Alex Wziontka

Department of Computer Science and Engineering
Michigan State University

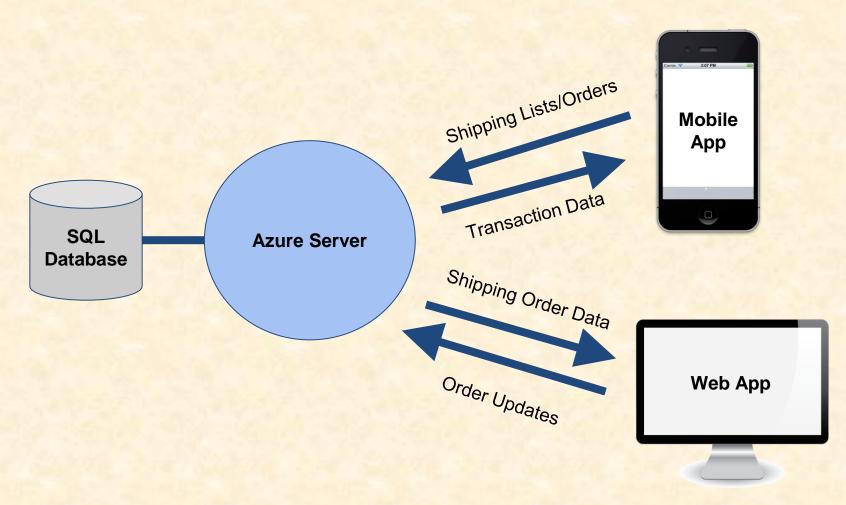

Fall 2016

Project Overview

- Create a personalized shopping list based on a customer's previous purchases
 - Editable with add and delete item buttons
- Provide an opt-in shipping service that will deliver items directly to customers homes
 - Suspend and resume feature
- Design a web application that provides back end administrative functionalities for Meijer employees

System Architecture

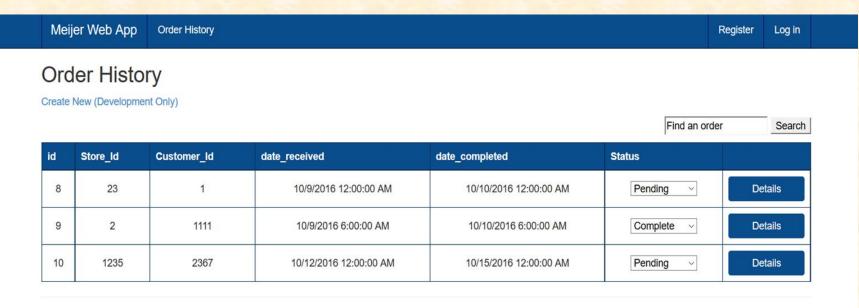

Shopping List Algorithm

- Currently returns any item the user has bought more than once on a weekly basis from the current day
- Organize data into dictionary with product as key and a list of transactions where that product was purchased as value
- Using this dictionary to break the data into weekly, monthly, and yearly patterns
 - Put together list based on these patterns and the current date

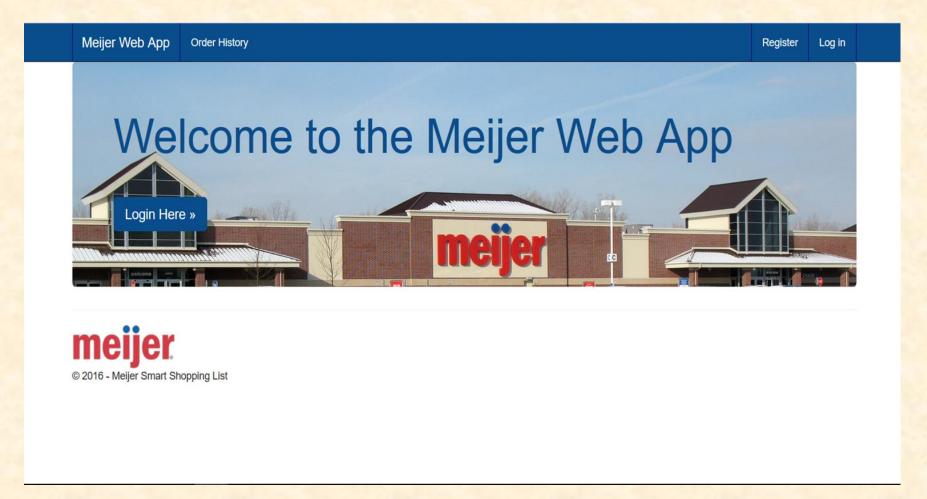

Web Application - Order History
