Michigan State University

Spring 2013

*From Students...
...to Professionals*

Project Overview

- EA develops games for all platforms with mobile development becoming a priority.
- Looking to eliminate the barriers to play cross platform.
- Streamline the process to allow the games to be played in the simplest and quickest way possible.

Functional Specifications

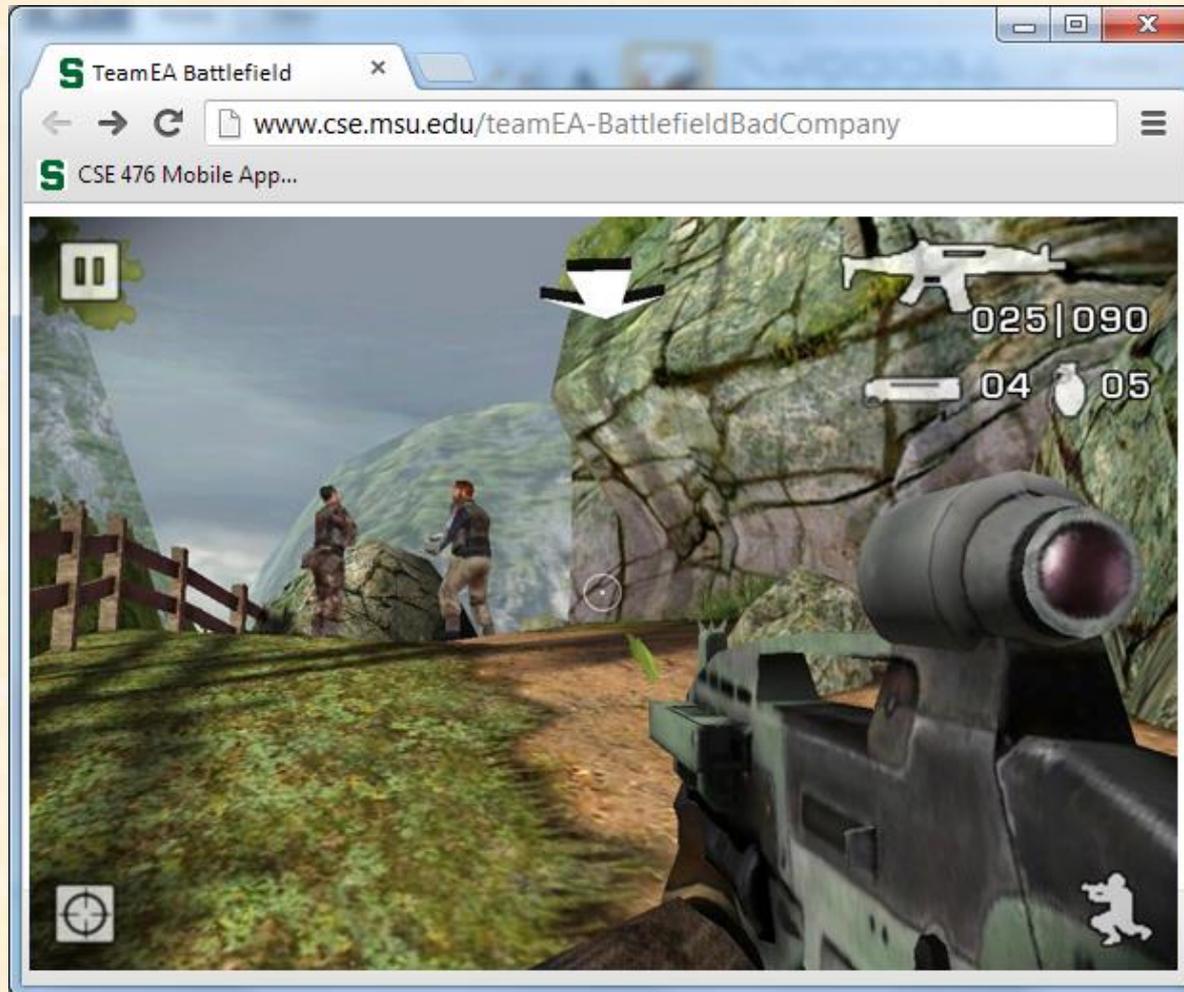

- Play your games how you want.
- Allow user to play EA games from their PC.
- Control the EA games with Android Device.
- Different control schemes available for different games.
- View the games to play over the web.

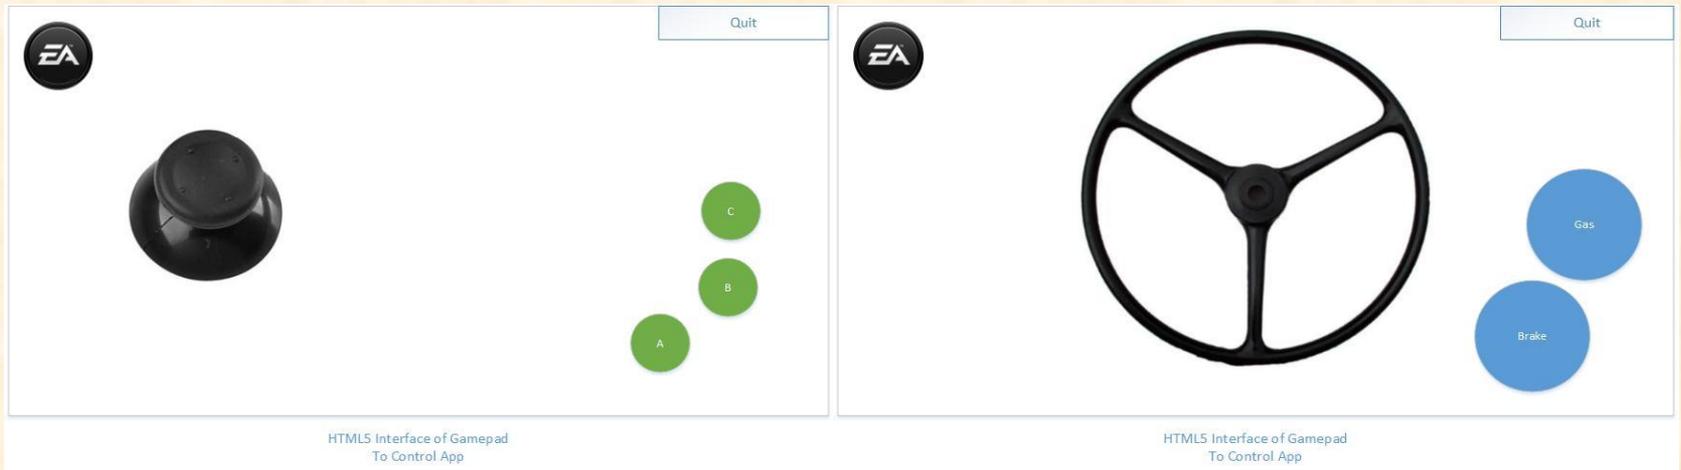

Design Specifications

- Server will be running the emulator.
- Games will be streamed to the home PC.
 - Website with search in order to find the apps you want.
- Emulator controlled wirelessly by Android device.
 - Different control schemes for different games.

Screen Mockup: Video Streaming

Screen Mockup: Control Schemes

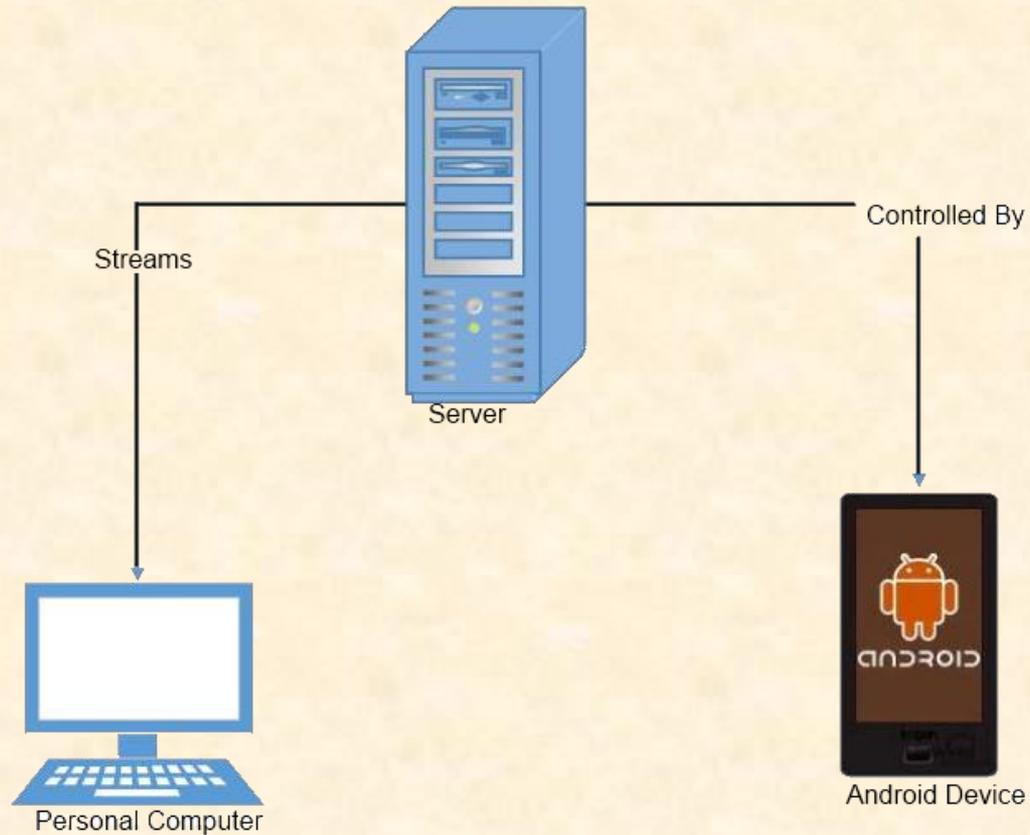

Technical Specifications

- HTML5 Webpage imbedded with JavaScript and PHP.
- Batch script to start emulator and game.
- HTML5 Mobile Web Application for Android Device Controller
- Intercommunication between Server-Streaming Webpage and Server-Android Device through internet transport protocols.

System Architecture

System Components

- Software Platforms
 - Windows Server 2012 Standard
 - GitStack
 - Android SDK
- Technologies
 - JavaScript & PHP
 - HTML5
 - TCP/IP & UDP/IP

Testing

- Testing for the device as a controller
- Testing different control schemes
- Test on different devices/resolutions
- Testing the emulator to successfully run games
- Testing streaming over WiFi

Risks

- Lack of experience on building HTML5 web page and programming Android based App.
 - Mitigation: Research and Investigate relative fields with open sources.
- Need different control interface for playing different EA games.
 - Mitigation: Comparing and finding similarities, try to build commonly used control interfaces.
- How to control the emulator on PC with mobile Device?
 - Mitigation: Build connection between PC and Android Device initially, then test the “Click and Response” between the two, finally consummate the whole control system.
- Lagging and Delay always happen during streaming.
 - Mitigation: Using appropriate internet transfer protocols for the data stream. If needed, using a lower resolution to showcase the app.
