Project Plan

Electric Vehicle Charging Station App

The Capstone Experience

Team Ford

Justin Grothe
Brian Jurgess
Kevin Karabon
Ryan Switzer

Department of Computer Science and Engineering
Michigan State University

Spring 2015

*From Students...
...to Professionals*

Functional Specifications

- Manage and monitor electric vehicle charging stations across Ford Dearborn campus
- Provide users with real time information on current status of vehicle charging stations
- Encourage electric vehicle owners to more efficiently use parking spaces

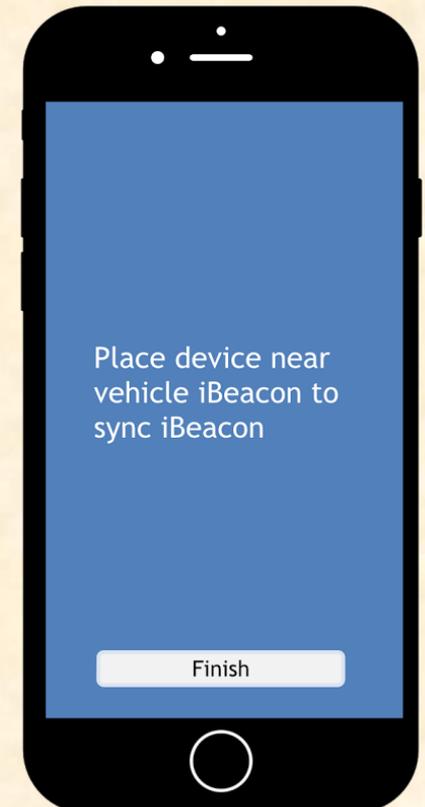

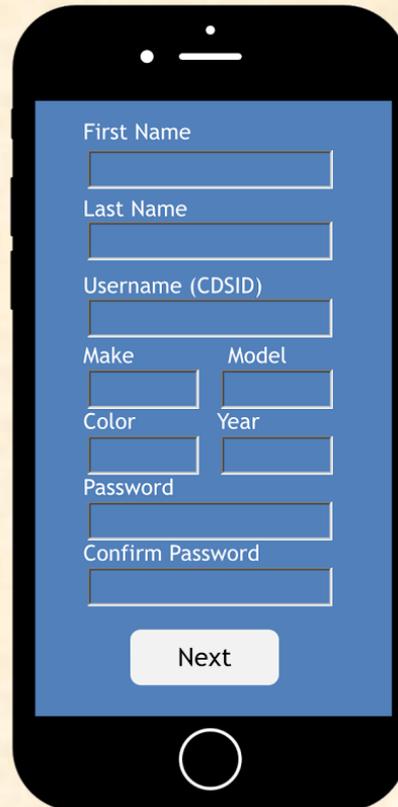

Design Specifications

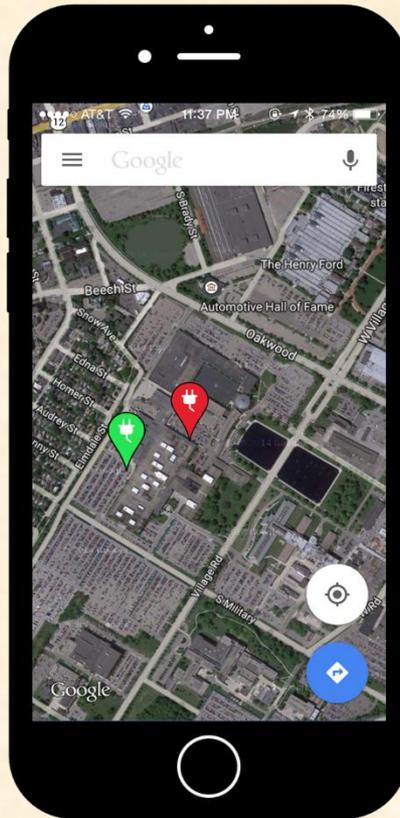

- Native iOS app will allow users to login and register their vehicle to an account
- Using the app, users will be able to locate available charging stations
- Users will also have the option of reserving a charging station ahead of time
- ‘Gamify’ the system by providing a leaderboard of people who respect 4 hour parking rule
- Push notification when 4 hours is approaching

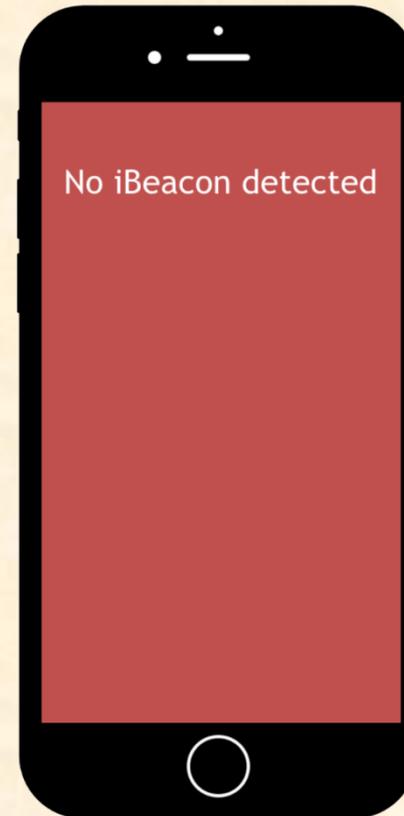

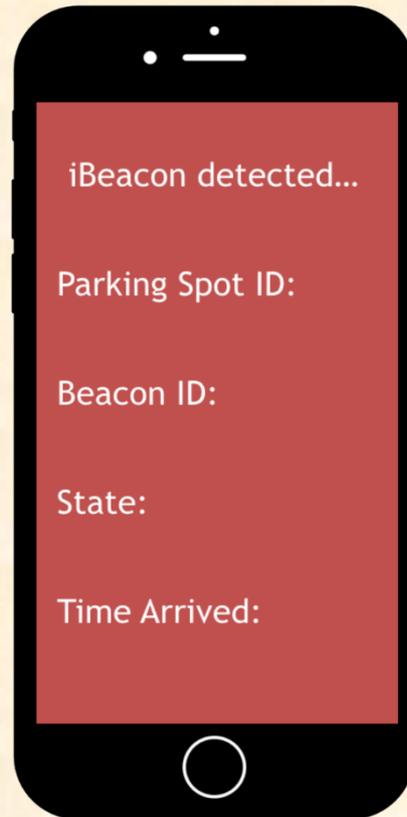

Screen Mockup: Registration

Screen Mockup: Station Availability

Screen Mockup: Test Harness App

Technical Specifications

iOS Mobile Application

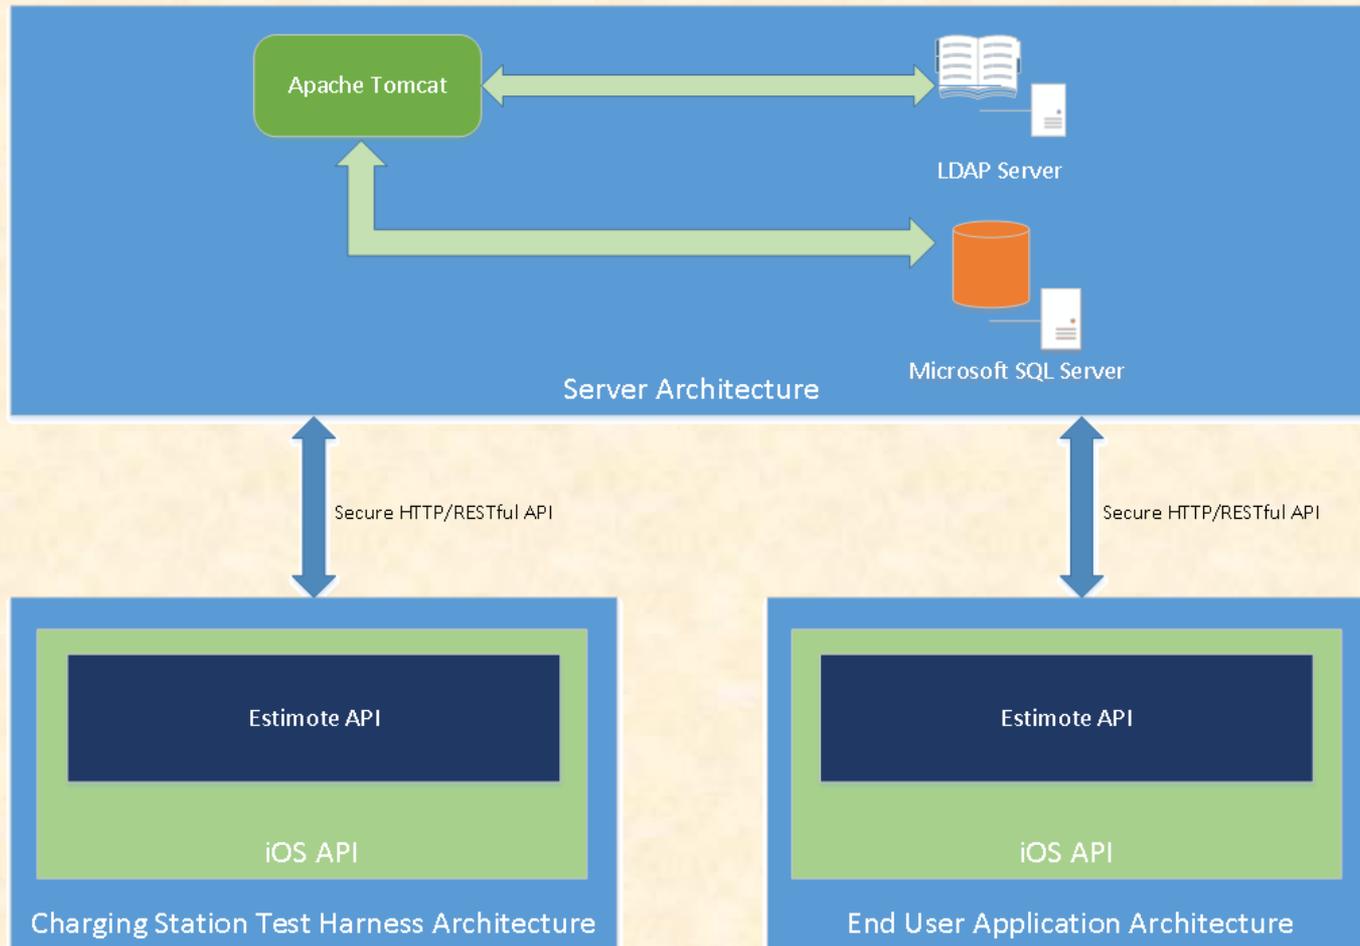

- Bluetooth used to communicate with iBeacons

Backend Web Services

- Web services backend provides RESTful API
 - HTTPS connection
- LDAP for user account management
 - Phased development approach
- SQL database for charging station vacancy information
 - Encryption TBD

System Architecture

System Components

- Hardware Platforms

- Dell Server
- Estimote iBeacon
- iPhone 5, 6

- Software Platforms / Technologies

Web Services Backend

- Windows Server 2012
- Apache Tomcat
- Spring framework
- OpenLDAP Server
- Microsoft SQL Server 2012

iOS Mobile Application

- Estimote API
- Google Maps API
- Cocoa Touch UI framework

Testing

- Web services backend – jUnit
 - Continuous integration with Jenkins
 - Gradle builds
- iOS mobile applications – XCTest
 - Attempt continuous integration with Jenkins

Risks

Limited Objective-C experience and mobile app development

- Limited experience with iOS app development
- Mitigation Plan: Spent the past 3 weeks learning iOS development

Lack of experience with LDAP

- No experience with setting up and integrating an OpenLDAP server
- Mitigation Plan: Designate one person as lead on integrating OpenLDAP; Sys admins learn how to set up an OpenLDAP server

Inexperience with physical limitations of iBeacons

- Research revealed difficulties in dealing with range and signal interference regarding iBeacons
- Mitigation Plan: Will need to perform extensive real world testing to understand ranges and signal fluctuations from the iBeacon device.

Lack of Microsoft SQL Server knowledge

- No experience utilizing and interacting with Microsoft SQL server or performing queries.
- Mitigation Plan: DBA will research how to create database and tables; Web app lead will research how to run queries from a web application.
