Department of Computer Science and Engineering

Michigan State University

Fall 2017

*From Students...
...to Professionals*

Functional Specifications

- Improve Firefox Screenshots Testing Suite to make it easier for developers to catch visual bugs and unintentional changes
- Increase functionality and reliability of screenshot testing tool
 - Add automated cropping
 - Add screenshot test cases
 - Better integrate output with Mozilla's testing frameworks
 - Reduce intermittent failures

Design Specifications

- The graphical components of the tool are outside the scope of the project
- The screenshot tool is command line based

Screen Mockup

- Like design specifications, screen mockups are not applicable to the project
- Mozilla's testing infrastructure does have tools to visualize test results, but are not part of this project

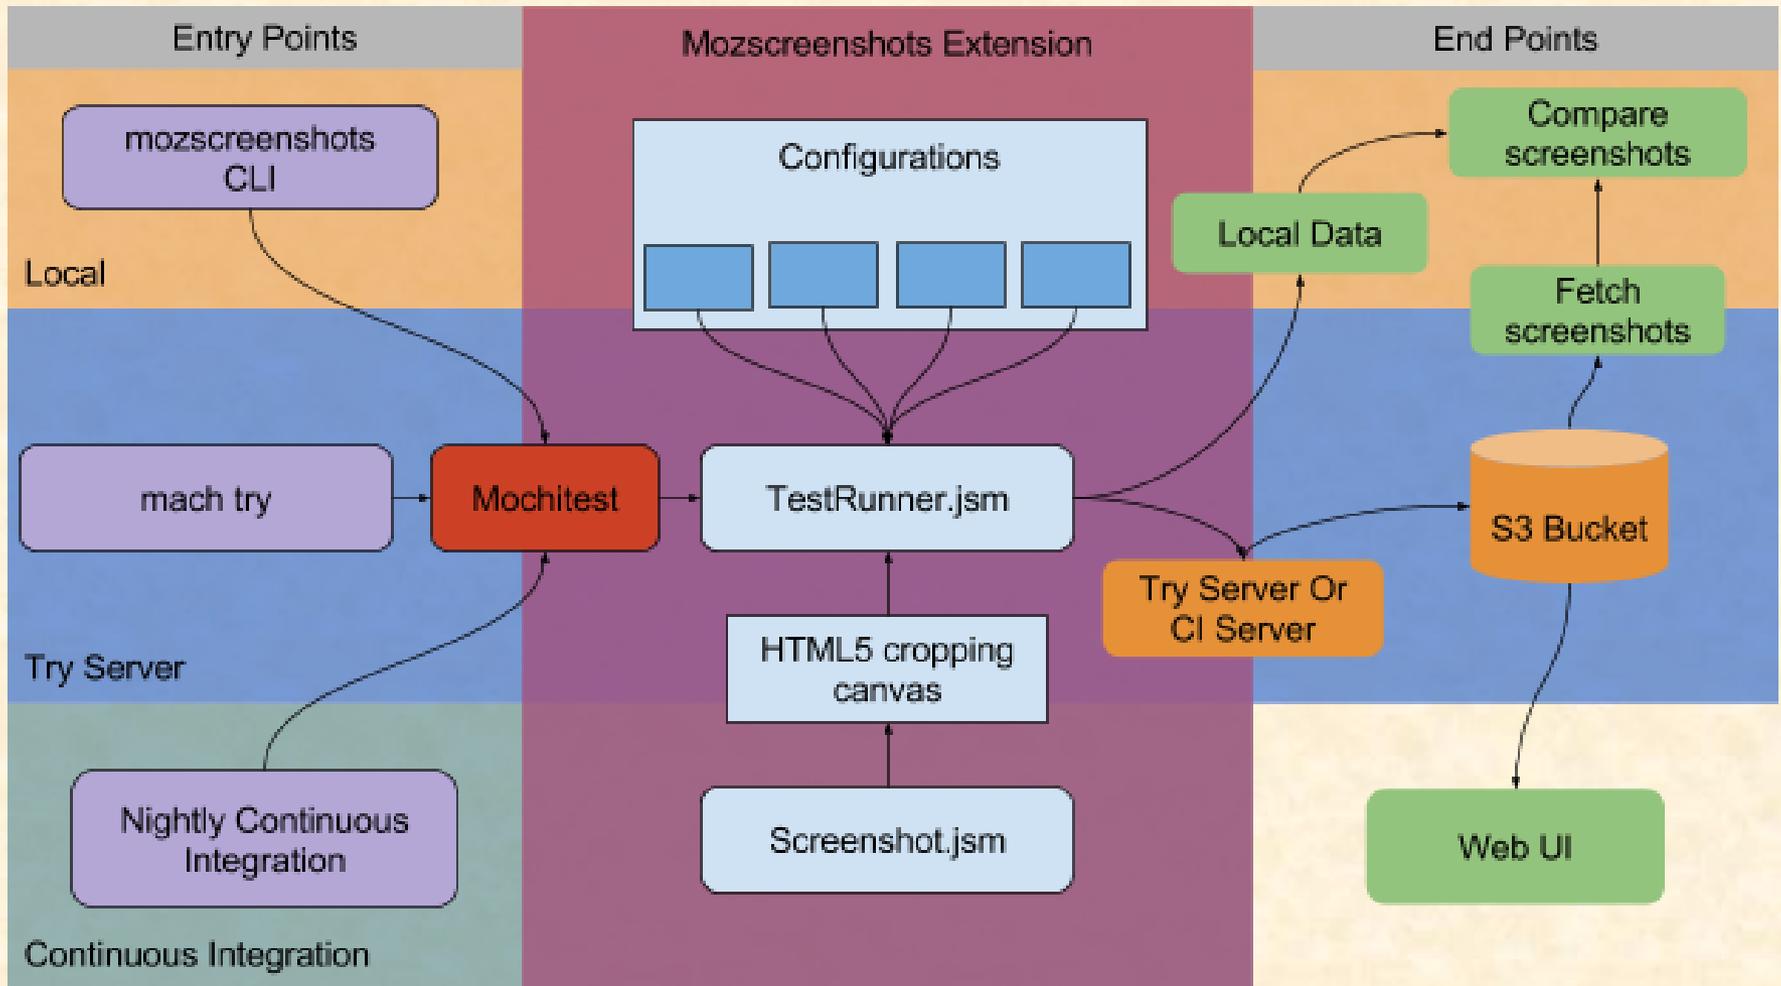

Technical Specifications

- Mozscreenshots extension
 - Ran by Mochitest
 - Manipulates Firefox UI
 - Responsible for taking and saving screenshots
 - Will apply cropping to these screenshots here
 - Will improve output to be more interpretable by other testing tools
- Mozilla's testing infrastructure
 - Web UI and command line tool for interpreting mozscreenshots's output
 - Largely outside the scope of this project

System Architecture

System Components

- Hardware Platforms
 - The project does not require specific hardware
- Software Platforms / Technologies
 - JavaScript, HTML5 Canvas, XUL, Python
 - Mercurial (VC), Bugzilla, IRC
 - Mochitest, Try servers
 - Largely implemented as Firefox legacy extension

Testing

- There is no testing framework for this tool
- Our contributions are reviewed by other developers of Firefox
- If there are problems with the tool, the Nightly community may be able to catch them
- Developing tests for the tool is not part of the specification, but could be a stretch goal

Risks

- Debugging intermittent failures
 - Recreating intermittent failures is difficult, and certain scenarios won't allow us to access the log files directly
 - Focus on fixing locally replicable issues, test on a broad range of systems, and client has agreed to attempt to provide copies of restricted log files
- Limited and disorganized documentation
 - Documentation is dispersed and sometimes non-existent
 - Communication with developers via IRC with questions concerning the software is vital. Also, all code written for this project will be kept in personal documentation
- Learning Mozilla specific technologies
 - Mozilla has many in-house technologies: JSM, XUL/XBL, Mach, Try servers, Mercurial
 - Identify the relevant technologies and restrict our focus to those
