# Project Overview

- Labeling buildings
  - Currently, many buildings on campus are similar looking and labels of building names are not obvious
  - By using our app, users can see a building name on top of each building and some descriptions using AR
- Wayfinding
  - Navigating campus using a physical or digital map is slow because a user needs to know surrounding information
  - AR tech can make navigating and exploring campus easier and more intuitive for new students and visitors by inserting graphics into the real world

# What's left to do?

- UI improvements
  - Show better ETA
  - Match the app icon
  - Have a unique style for labels that are clickable
  - 2D mini-map
- How-to dialog
- Alert when the user is too far off path
