Department of Computer Science and Engineering Michigan State University

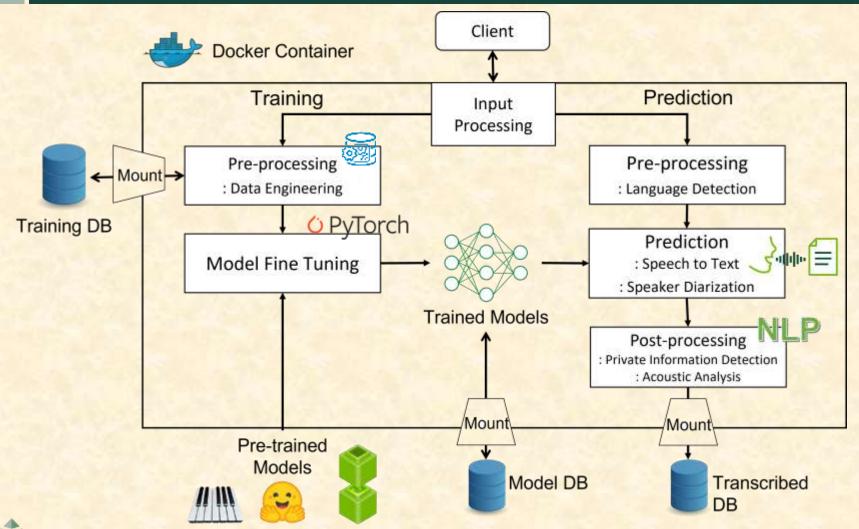

Spring 2022

Project Overview

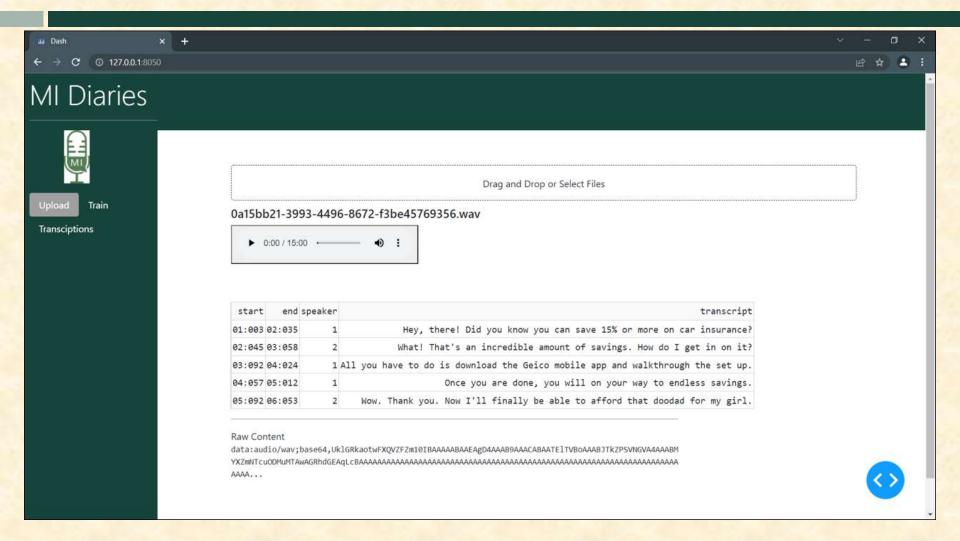

- Problem: The Department of Linguistics, Languages and Cultures' MI Diaries project needs to replace their outsourced speech-totext software from Google to an in-house package
- Motivation: Privacy and monetary concerns
- Solution: All-in-one speech-to-text machine learning pipeline which takes in audio files and outputs time-aligned transcripts

What's left to do?

- Core Features
 - Switch training process to NVIDIA NeMo
 - Overlap detection
 - Docker
 - Integrate into MI Diaries App
- Additional Features
 - FAVE acoustic analysis
 - Sensitive Information Extraction
 - More models for dialects and languages
