...to Professionals*

Functional Specifications

- In a digitized world, consumers want to feel “special” in their business relationships
 - MSUFCU wants to: better understand members’ financial needs, provide a more personal banking experience and financial education
- “Hopes and Dream” is a hyper-personalized banking platform that uses an iOS mobile app, Amazon Alexa, and employee facing CRM
- Members will take a quiz about spending habits and financial goals that will build out a personal profile
 - Combined with analysis of current spending habits, will provide member with financial tips and tailored MSUFCU offers
- A web employee CRM will allow employees to view these profiles and provide a unique, more personal experience in member interactions

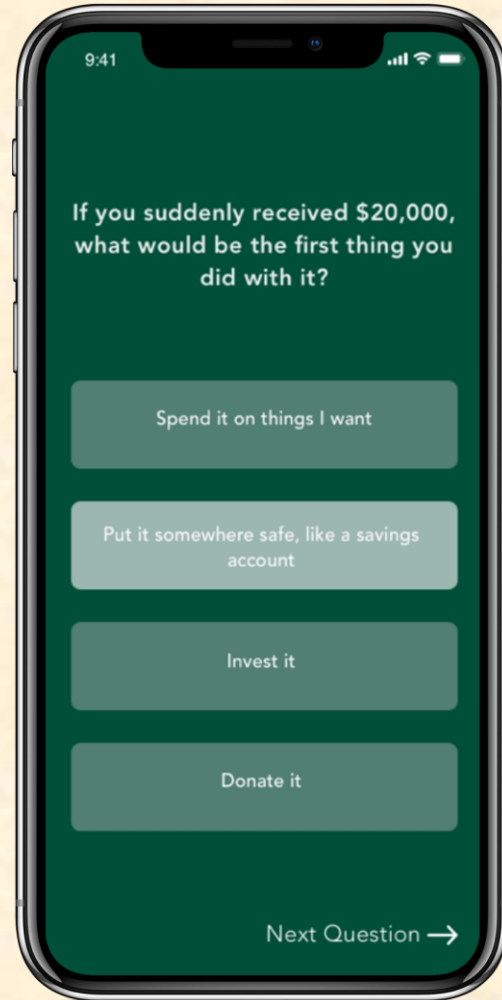

Design Specifications

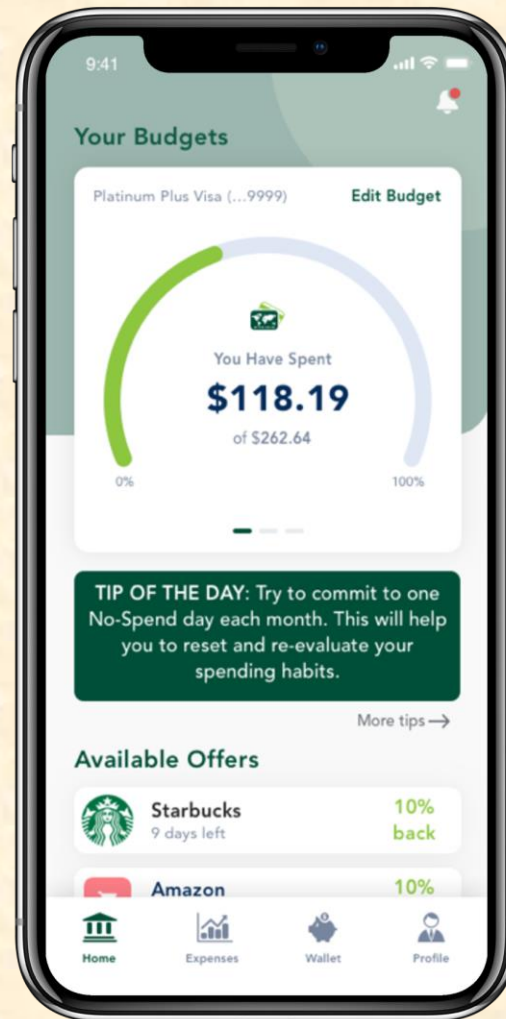

- Quiz to build personalized profile for customers
- Financial tips and offers based on the user's goals and spending habits
- Expense tracking through visual charts and budgets
- Integration with Amazon Alexa
- Web-based content management system for employee use

Technical Specifications

- Front End:
 - Web application
 - Mobile application(IOS)
 - Alexa
- Back End:
 - Server(CentOS)
 - API layer(Python)
 - Database(MySQL)
 - Web Portal

System Architecture

System Components

- Hardware Platforms
 - iOS device
 - Rack Mounted Server
- Software Platforms / Technologies
 - Xcode
 - Alexa Skills Kit
 - AWS Lambda
 - MySQL
 - Flask
 - Python 2.7
 - C++
 - Nginx
 - HTML5&CSS3
 - PHP

Risks

- **Quiz Complexity**

- Users will have to complete a quiz when they first use the app. User might lose interest thus not able to gather enough data.
- The questions will be created with the assistance of a UX designer to ensure users stay engaged. More questions will be offered later on in order to gather more data.

- **Necessary vs. Unnecessary Expenditures**

- Difference between necessary and unnecessary expenses in order to offer advice or warn users about their spending habits is vague.
- Necessity will be set using merchant category codes. Users can keep the default values or edit the necessity of certain groups to further customize it for themselves.

- **Different Platforms Communicating Through API**

- Multiple platforms that may not communicate the same way through the API.
- Conduct research on the different platforms and how they request data.

- **Securing Alexa**

- The app will contain user information that can be accessed by Alexa
- Develop functionality for user verification either through the app or by a unique voice code.
