# Project Overview

---

- Optimize project billing process for Vectorform employees
- Automatically track time spent working on billable projects
- System learns over time which project code to assign to time statements
- User can view time statements for confirmation through web portal

# System Architecture

# Screen Shot: User Portal

The screenshot displays a web application interface with a table of project tracking data and an 'Add a new entry' form. The table has columns for Project Code, Start Time, End Time, Tracking Module, and Actions. The form includes fields for Project Code, Tracking Module, Start Time, and End Time, along with an 'Add' button.

# Screen Shot: Editing

The screenshot displays a web application interface for project tracking. At the top, there is a browser window with the URL 'vectorform/vectorform\_repo' and a date filter set to '10/18/2022'. Below the browser, a table lists tracking entries with columns for Project Code, Start Time, End Time, Tracking Module, and Actions. The first row is highlighted, showing 'project-23' with a start time of 1:01:45 AM and an end time of 1:01:55 AM, using 'Microsoft Teams'. Below the table is a form titled 'Add a new entry' with fields for Project Code, Tracking Module, Start Time, and End Time, each with a clear button (X).

# Screen Shot: Date Selector

The screenshot displays a web application interface. At the top, there is a browser window with the URL `localhost:3030`. Below the browser, a date selector is active, showing a calendar for October 2021. The calendar has a date range from 10/14/2021 to 10/20/2021. The main content area features a table with the following columns: Project Code, Start Time, End Time, Tracking Module, and Actions. The table contains 10 rows of data. Below the table, there is a form titled "Add a new entry:" with fields for Project Code, Tracking Module (a dropdown menu), Start Time, and End Time, each with a clear (X) button. An "Add" button is located at the bottom of the form.

# What's left to do?

---

- Simplifying startup
- Hiding terminals in background
- Improve smart metadata tracking
- Implement confirmation system
